Improvements on training materials for health information manager in Japan - Development of a basic medicine workbook along ICD-10 -

Yukiko Yokobori, Toshio Ohi, Kenji Shuto, Syuzo Yamamoto

Abstract

It has been more than 30 years since our Health Information Manager's training program was introduced under the Japan Hospital Association (JHA) business scheme. We developed a new workbook for trainee's home learning as an improved training material this year. Our improvements aimed at high-quality education and an efficient management for a large number of trainees counted over 10,000. We hope that our training materials and long experience of developing them will help for international standardization of coding training education.
